

PHOENIXPET
a new way

PhoenixPET soars even higher

Extrupet proudly announces a major expansion at its “bottle-to-bottle” PET facility in Johannesburg

Extrupet is pleased to announce that it has concluded its negotiations on the expansion of its “bottle-to-bottle” plant at its state-of-the-art facility in Wadeville, Johannesburg. The build on the equipment has already commenced and will on its arrival add an additional 14 000 tons to its annual output capacity by quarter 4 of this year. The technology chosen is European with a proven track record supplying the largest Brand Owners in the world, and is both USFDA and EFSA compliant.

Having made significant inroads with key brand owners such as Woolworths, Unilever, Pick n Pay and Clover, PhoenixPET’s new upgrade will introduce new qualities of PET resin which will rival virgin PET material for quality and capabilities. New end-use markets that can now avail themselves of the new grades of polymer include carbonated soft drinks as well as “bottled” water.

Commercial
production
commencing
quarter 4, 2014.

14 000 tons
additional
capacity.

Total installed
capacity of
PhoenixPET 20 000
tons per annum.
